International: +44 1642 300500
Website: www.basrid.co.uk Email: enquiries@basrid.co.uk

INTRODUCTION

The Certified Reference Materials have been prepared under rigorous laboratory conditions and are issued by Bureau of Analysed Samples Ltd. under the auspices of an Honorary Advisory Committee and a body of approximately 150 Co-operating Analysts representing Independent Laboratories and Manufacturers and Users of the materials concerned.

(a) **CERTIFIED REFERENCE MATERIALS (CRMs)**

British Chemical Standard Certified Reference Materials (BCS-CRMs) are normally analysed by at least five Analysts, and a certificate showing the individual mean values obtained by each Analyst and a summary of the methods used is supplied with each sample. Certificates issued since 1984 also give the standard deviation of the intralaboratory means, and those issued since 1994 express the level of confidence of the certified value as the 95% half width confidence interval.

EURONORM Certified Reference Materials (ECRMs) were prepared under the auspices of the European Committee for Iron and Steel Standardization (ECISS). Each one is issued with a certificate giving the names of the participating laboratories, the mean values obtained by each laboratory for each element and a statistical evaluation of the laboratory means. The certificate also includes a summary of the methods of analysis used. Before publication each certificate has been approved by the Producing Organisations, namely Bureau of Analysed Samples Ltd. (BAS) in the UK, Institut de Recherches de la Siderurgie Française (IRSID) now ArcelorMittal Maizières Research (AMMZ) / Centre Technique des Industries de la Fonderie (CTIF) in France, Stahlinstitut VDEh (VDEh), BAM Bundesanstalt für Materialforschung und prüfung and Max-Planck-Institut für Eisenforschung (MPI) in Germany and the Nordic CRM Working Group (NCRMWG) in the Nordic countries. Although BAS is no longer part of the ECRM Producers Group , there are still over 50 BAS ECRMs which will be available until their exhaustion, when they will be replaced by BCS-CRMs and/or SS-CRMs.

There are also some existing BCS-CRMs which have been accepted as interim ECRMs after examination by laboratories in the EU. These are indicated with an ECRM number alongside the existing BCS-CRM number.

Bureau of Analysed Samples Ltd. act as UK distributors for ECRMs prepared by AMMZ/IRSID/CTIF in France, BAM in Germany and Jernkontoret in Sweden, and details of these samples, most of which are held in UK stock, are given in a separate BAS 'Outside Source' Reference Materials Catalogue, copies of which will be supplied on request. Further information regarding the preparation, certification and supply of ECRMs, and the use of the statistical information given on their certificates is given in Technical Reports **CEN/TR 10317:2014** and **CEN/TR 10350:2013** which are available in the UK from the BSI, 389 Chiswick High Road, London W4 4AL.

All BCS-CRM and ECRM samples are supplied in the finely divided form and many of them are also available in disc form for optical emission and X-ray fluorescence spectrometry.

Spectroscopic Standard Certified Reference Materials (SS-CRMs) have been specially prepared to provide samples of uniform composition in a form suitable for use with optical emission and X-ray fluorescence spectrometers. Each sample has been analysed by at least five laboratories, and a certificate showing the individual mean values obtained by each laboratory and a summary of the methods used is supplied with each sample or set of samples.

Steel samples are usually in the form of discs cut from round bar. Cast iron samples, which are prepared in accordance with specifications devised by the former British Cast Iron Research Association (BCIRA), are in the form of chill cast rectangular blocks.

(b) **REFERENCE MATERIALS (RMs)**

British Chemical Standard Reference Materials (BCS-RMs) and Spectroscopic Reference Materials, e.g. high purity metals and ceramic materials (p.16), low alloy cast irons, high chromium irons, nickel chromium irons and austenitic (Ni-resist) irons (p. 22) and copper base alloys (p. 23) are normally analysed by only two laboratories and are not given certified status.

(c) **SPECTROSCOPIC SETTING-UP SAMPLES (SUS)**

These Setting-up Samples (SUS) have been specially prepared to meet the day to day setting-up requirements of laboratories using direct reading spectrometers for production control analysis. Their use will conserve supplies of Spectroscopic Standard CRMs for calibration purposes only and will relieve spectrographers of the problem of finding suitable samples within their works for their daily setting-up requirements.

The steel samples are in the form of round bar. The cast iron samples, prepared in accordance with specifications devised by the former British Cast Iron Research Association (BCIRA), are in the form of chill cast rectangular blocks.

GENERAL INFORMATION

Our website, at www.basrid.co.uk, is continually being improved and now includes a page of downloadable certificates for all currently available BAS products.

Every endeavour is made to maintain a continuous supply of all samples in this catalogue by completing the preparation of an appropriate replacement by the time each sample becomes exhausted. When orders are received for obsolete samples the relevant replacements will normally be supplied. If for any reason such a sample is not acceptable, full credit will be allowed if it is returned carriage paid provided that the seal on the carton containing finely divided samples is unbroken.

Information regarding new samples in course of preparation will be supplied on request. When these are available for distribution a notice to this effect will be made on our website.

QUALITY ASSURANCE

Bureau of Analysed Samples Ltd. is very pleased to advise that in November 1994 its Quality System was formally approved and recognised by the award of a Certificate of Registration to the Quality Standard BS EN ISO 9002:1994 for the production and supply of CRMs, RMs and SUS. This certificate has now been revalidated to the new Standard BS EN ISO 9001:2015. Furthermore, BAS was accredited, in June 2006, to the International Guide, **ISO Guide 34** and the accreditation has since been updated to the full Standard **ISO 17034:2016**.

BRITISH CHEMICAL STANDARD AND EURONORM CERTIFIED REFERENCE MATERIALS - High Purity Irons and Unalloyed Steels

The figures are listed primarily as a guide to purchasers. In some cases provisional figures are given which may differ slightly from those given on the Certificate. **Always consult the Certificate issued with the sample to obtain the accurate analysis.**

CHEMICAL COMPOSITION (nominal mass content in %) - Figures in bold type certified, figures in small italic type only approximate.

High Purity Irons (Finely divided material - units of 100g: 097-2 also available as 38mm dia. x 30 or 25mm discs - see page 18)

BRITISH CHEMICAL STANDARD CERTIFIED REFERENCE AND REFERENCE MATERIALS - Soda Ash, High Purity Metals, Ceramic Materials and Benzoic Acids

Although the High Purity Metals, Ceramic Materials and Benzoic Acid samples below have been carefully analysed by both BAS Ltd. and an independent laboratory, they have been classified as RMs and not CRMs in order to distinguish them from BAS CRMs which are normally analysed by at least five laboratories.

CHEMICAL COMPOSITION (nominal mass content in %)

Soda Ash Certified Reference Material (Finely divided material - units of 100g)

BCS-CRM No.	Description	Na_2CO_3	NaCl	Fe_2O_3	Na_2SO_4	Insoluble Residue
526	Soda Ash (SGT Soda Ash 1)	**99.74**	**0.126**	**0.0005**	**0.008**	*<0.02*

High Purity Metal Reference Materials (Finely divided material or blocks/bars - see below)

Ceramic Reference Materials (continued)

BCS-RM No.	Description		B_2O_3	ZrO_2	PbO	ZnO	Li_2O
205a	Borax Frit	(cont.)	*18.46*	*0.34*	*0.05*	*0.16*	*<0.01*

Benzoic Acid Reference Materials (BCS-RM 190t supplied in units of 100 x 0.2g tablets; BCS-RM 190v supplied in units of 100g of crystals or 100 x 1.0g tablets)

BCS-RM No.	Description	
190t	Benzoic Acid	Purity 100.0±0.05%, Calorific Value, 26,439.7±12.2 joules per gramme based on mass (Certified by Pattinson and Stead, Middlesbrough, UK)
190v	Benzoic Acid	Purity 100.0±0.06%, Calorific Value, 26,443.2±6.6 joules per gramme based on mass (Certified by Pattinson and Stead, Middlesbrough, UK)

SPECTROSCOPIC STANDARD CERTIFIED REFERENCE MATERIALS - Unalloyed Steels

The figures are listed primarily as a guide to purchasers. In some cases provisional figures are given which may differ slightly from those given on the Certificate**. Always consult the Certificate issued with the sample to obtain the accurate analysis.**

CHEMICAL COMPOSITION (nominal mass content in %) - Figures in bold type certified, figures in small italic type only approximate.

Plain Carbon Steels (Wrought) (SS-CRM: 38mm dia. x 19mm discs, ECRM: 38mm dia. x 30 or 25mm discs except 056-2(D): 44mm dia. x 30 or 25mm discs)

SPECTROSCOPIC REFERENCE MATERIALS - Cast Irons

These samples are intended for the calibration of optical emission and XRF instruments with respect to the alloying and trace elements below. Although they have been carefully analysed by both BAS Ltd. and an independent laboratory, they have been classified as RMs and not CRMs in order to distinguish them from BAS CRMs which are normally analysed by at least five laboratories.

CHEMICAL COMPOSITION (nominal mass content in %)

Cast Iron Reference Materials (All are 40mm x 37mm x 10mm chill cast blocks except LARM 5/1, CRRM 1/2, CRRM 3/2, CRRM 4/2, CRRM 5/2, NIRM 2/2, NIRM 5/1, NIRM 6/1, NIRM 8/2, SIMO 1/5 and SIMO 2/3 which are approximately 48mm x 42mm x 12mm chill cast blocks).

These samples have been prepared jointly by Replicast Ltd./Castings Technology International (formerly BCIRA) and BAS

SPECTROSCOPIC REFERENCE MATERIALS – Lead Base Alloys

These samples are intended for the calibration of optical emission and XRF instruments with respect to the alloying and trace elements below. Although they have been carefully analysed by both BAS Ltd. and an independent laboratory, they have been classified as RMs and not CRMs in order to distinguish them from BAS CRMs which are normally analysed by at least five laboratories.

CHEMICAL COMPOSITION (nominal mass content in %)

Lead Base Alloy Reference Materials (Approx. 50mm x 50mm x 20mm chill cast blocks, also available as finely divided material – units of 100g). These samples have been prepared jointly by Castings Technology International (formerly BCIRA) and BAS

SETTING-UP SAMPLES FOR DIRECT READING SPECTROGRAPHS

These samples have been thoroughly examined both spectrographically and chemically to confirm the homogeneity of the bulk samples.
Their compositions have NOT, however, been accurately determined since it is not intended that they should be used as Spectroscopic Standard CRMs or as RMs.
An Information Sheet is supplied with each sample giving the approximate composition.

NUMERICAL INDEX (Including Certification Dates)

Certificates may be reprinted from time to time to accommodate updated text or statistical treatment. In certain cases, where chemical analyses carried out after issuance of the original certificate lead to additional or revised certified data, the "Date of Latest Certificate" below is stated in bold. If the certificate in your possession is not the current one, we shall gladly supply this to you on request.

PURCHASE PROCEDURE

ORDERING PROCEDURE

Please give the quantity, unit size or weight, reference number and description of the samples required, and ensure we have your full delivery and invoice address.

PRICES

For prices see separate price list. Prices are stated in £ Sterling (GBP) and are subject to revision without notice. They exclude packing, despatch and VAT where applicable but do include a Certificate of Analysis, which accompanies each CRM. If additional Certificates of Analysis are required we will charge a nominal price of £10.00 each for these.

TERMS

The following terms apply:-

(i) **United Kingdom.** Net monthly account (subject to approved bank and trade references.) Insurance and freight are charged extra, and Value Added Tax at the standard rate is charged on the net invoice value.

(ii) **Overseas.** Packing, documentation, insurance and carriage are charged extra at cost. We shall be pleased to forward a quotation detailing these costs upon request. Prepayment is required on all orders.

PAYMENT

To enable us to meet customer requirements with the minimum of delay, new and occasional customers are asked to make payment in advance using one of the following options:-

By BACS or inter-bank transfer to Barclays Bank PLC, Middlesbrough, Sort Code 20-56-74, SWIFT No BUKBGB22

In **Sterling** to Account No 90217506, IBAN No GB16 BUKB 2056 7490 2175 06

In **Euros** to Account No 85465422, IBAN No GB19 BUKB 2056 7485 4654 22

We accept Barclays charges in the UK but not your own bank's charges.

By credit/debit card.

Customers who indicate that they wish to purchase by this method will receive a secure link for Worldpay by email. The link will only be sent at our request and is not available from our web site. For additional security we do not require you to send us any card details to our address.

OUTSIDE-SOURCE REFERENCE MATERIALS

Bureau of Analysed Samples Ltd also distribute reference materials from any recognised Producer in the world. Many such reference materials are maintained in our UK stock for immediate despatch if required. Further information on all such samples is given in the BAS Outside-Source Reference Materials Catalogue which is available on request.

Please send all orders, enquiries and correspondence to:-
